leon-wu.com | linkedin.com/in/leon-wu-tsan-yu/ | github.com/LeonWu813

Full-Stack Software Engineer | MSCS Candidate, Northeastern University

Full-stack engineer with production experience across two self-built platforms (one adopted by a real company) and one AI-orchestrated system. Comfortable across Java/Spring backends, React frontends, and AWS infrastructure.

EXPERIENCE

Front-End Developer | Exascend

09/2023 - 08/2025 / Taipei, Taiwan

- Built a custom JavaScript event-tracking system posting structured user interactions to CRM and GA4 APIs, cutting manual reporting 70%.
- Two customer-facing websites went from requirements to shipped product under my ownership (HTML, CSS, JavaScript), growing monthly active users 3.5x, from 12,000 to 41,350.
- Page views rose 48.8% after a round of technical SEO and accessibility audits (Google Search Console, Lighthouse, WCAG) that I validated with A/B testing.

Marketing Project Manager | GoFreight

07/2021 - 03/2023 / Taipei, Taiwan

- Built and maintained a front-end codebase (HTML, CSS, JavaScript) with an A/B testing pipeline of variant logic and event tracking, lifting conversion rate 67% through iterative experimentation.
- Led cross-functional teams through a product launch, coordinating tracking integrations and a cross-channel strategy that generated $16.5K in MRR.

PROJECTS

Campaign & SEO Management Platform

Demo | GitHub: marketing-analytics

Java, Spring Boot, PostgreSQL, Redis, Spring Security/JWT, React/TypeScript, Docker, AWS, GitHub Actions (CI/CD)

- Built and deployed a full-stack analytics platform (tracking snippet, campaign manager, SEO auditor) adopted in production by a real company, cutting recurring analytics work ~60% (hours/week).
- Designed stateless JWT auth so a second EC2 instance across Availability Zones could be added with zero code changes, with the ALB failing over 100% of traffic automatically if one AZ goes down.
- An unauthenticated public event-ingestion endpoint still needed protecting: enforced ownership checks only on reads, and rate-limited writes to 50 req/min per IP via a Redis-backed distributed counter, closing off both cross-instance bypass and database pollution.

Multi-Agent Software Development System

GitHub: multi-agent-development-system

Claude Code (subagents, skills, hooks), Bash, Git

- Architected a six-agent pipeline (PM, Doc-Sync, Tech Lead, Engineer, QA, Retrospective) that plans, builds, and QAs software autonomously, gated by human approval at every handoff with git-backed rollback.
- Directed the system to build TabVault (tab-vault.com), a deployed Chrome extension, PWA, and Spring Boot backend, personally reviewing and approving every agent-authored architectural and security decision before merge.

EDUCATION

Northeastern University

07/2025 - 12/2027 (Expected) / Seattle, WA, United States

- Master of Science in Computer Science. GPA: 3.9/4.0
- Relevant Coursework: Scalable Distributed Systems, Data Structures & Algorithms, Database Management Systems, Object-Oriented Design, Discrete Structures

National Chengchi University

09/2017 - 06/2021 / Taipei, Taiwan

- Bachelor of International Business. GPA: 3.5/4.0

SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL, C++

Backend: Spring Boot, Spring Security, Spring Data JPA/Hibernate, JWT, PostgreSQL, Redis, REST APIs, JUnit/Mockito

Frontend: React, Redux Toolkit/Zustand, TanStack Query, Tailwind CSS

Infrastructure & DevOps: Git, Docker, CI/CD (GitHub Actions), AWS (EC2, ALB, RDS, ElastiCache, S3, CloudFront)

AI & Agentic Development: Claude Code (subagents, skills, hooks), agentic workflow orchestration, LLM API integration
